

Non-energy benefits can tip the scales in favor of an energy-efficiency project

By Ira Krepchin

June 8, 2015

Energy-efficiency projects can not only reduce energy bills but also offer non-energy benefits (NEBs). While NEBs may be hard to quantify, they could help tip the scales in getting an energy-efficiency project approved. This downloadable graphic explains some of the possible savings related to NEBs and the ways to account for NEBs in your energy-efficiency project's cost estimates.
