

The newest trends in digital marketing: A guide for utilities

By Anna Nixon

July 12, 2021

Curious about the latest digital marketing trends but don't have the time or resources to experiment with them? To help you decide if they're worth adding to your marketing strategy, we've compiled our research on augmented reality, Nextdoor, podcasts, interactive content, and user-generated content. We're also sharing examples of these trends in action from inside and outside of the utility industry.

Learn more about utility digital marketing trends

E Source members can read our report [Digital marketing trends that engage customers and drive program results](#) for more details and utility examples.

Augmented reality

Augmented reality is a digital technology that lets users view and interact with virtual objects in their real-world environment. Utilities have started using this technology to offer virtual home audits during the COVID-19 pandemic. You could also use augmented reality to show customers where solar panels could go on their roof, how an electric vehicle (EV) charger could fit in their garage, or what a new energy-efficient appliance would look like in their kitchen.

Furniture and home goods retailer IKEA offers customers [IKEA Place](#), an Apple iOS app that uses augmented reality to show customers how its furniture will look and fit in their spaces (**figure 1**). The experience gives customers more confidence in their furniture purchases by letting them interact with virtual versions of 2,200 realistic and true-to-scale pieces of furniture.

Figure 1: IKEA Place app uses augmented reality

Customers can see how furniture will look in their space before they purchase it.

Nextdoor

Nextdoor is a social network that sorts users into private groups based on where they live. Utilities mainly use Nextdoor for targeted outage and safety communications. But utilities could also use the site to:

- Share emergency-preparedness information
- Market new products and services
- Gather feedback by using polls
- Educate customers about energy efficiency and other topics
- Advertise local utility events and trade allies
- Promote self-service channels

As with any social network, you should post consistently but only when you have something interesting to say. Posting irregularly, too often, or not often enough can overwhelm or confuse followers and hurt your reputation. Nextdoor offers a [public agencies platform](#) to make it easier for utilities and other public agencies and service providers to manage their presence in several neighborhoods.

The Texas electric and gas distribution company CoServ Electric has an active [CoServ Electric Nextdoor page](#) (**figure 2**). Its posts have included:

- Targeted construction and outage announcements and updates
- Information about how to report an outage and get status updates and estimated restoration times
- Previews of and links to news articles on its website
- Holiday celebrations for National Donut Day, Memorial Day, Lineman Appreciation Day, and National Safe Digging Month
- Details about local meetings and charity clinics
- Scam awareness

CoServ Electric connects with customers to promote offerings, highlight projects, and have fun on lighthearted national holidays.

Did you get a text message from CoServ today?

Communications Team from CoServ · 10 Jun

Don't worry, it's not spam! Starting today, Members can text us at 855-938-3496 to report outages, get status updates and estimated restoration times. We will no longer use the old six-digit number for outage notifications.

If you were previously signed up to receive text alerts, you are already enrolled with the new number and don't need to enroll again. Please delete the old six-digit number that was used by SmartHub for text communications and save the new 10-digit phone number.

Podcasts

Hosting a podcast can help you build trust with customers and educate them about topics like energy efficiency, the energy industry, and new programs and services. It can also help you reach customers who prefer to listen to their news rather than watch or read it. But before you start a podcast, you should think about long-term strategies and goals. Producing a good podcast and building an engaged audience takes time, money, and consistency.

Advertising on popular podcasts is another, simpler way to access this market. Ads on podcasts are especially effective, according to the Stitcher press release [Podcast advertising generates up to 4.4x better brand recall than other digital ads](#). You can reach small but targeted audiences by advertising on podcasts that relate to your topic. Listeners trust the host, who delivers your 15-to-60-second ad before, during, or after the podcast. But because listeners can choose to fast-forward through your ad, it's hard to track metrics.

On its podcast [Plugged In](#) (figure 3), Con Edison discusses topics ranging from batteries and electric vehicles to safety and corporate issues. We spoke with Philip O'Brien, assistant director of media relations at Con Edison, who said the utility launched the podcast to create a new way for employees, industry professionals, and the public to hear about newsworthy and timely information from the utility. O'Brien and a cohost focus their episodes on new utility programs, hot topics, and the energy industry. The utility posts monthly or bimonthly episodes on Soundcloud, iTunes, and the employee intranet.

In another episode of Plugged In, Con Edison's Philip O'Brien and Anne Marie Corbalis discuss the utility's award-winning commitment to diversity, equity, and inclusion.

Interactive content

Interactive digital content is anything you can click on, swipe, or interact with. Examples include quizzes, calculators, polls, surveys, 360-degree videos, and interactive stories and infographics. This kind of content attracts, engages, and educates your customers while letting them personalize the experience. It's also easy to share on social media, which can increase your reach and drive traffic to your website.

Interactive content can be expensive to make, so be sure to give it purpose. Drive customers to a desired goal, action, or behavior. Or use interactive content like polls and quizzes to learn about your audience's behaviors, interests, preferences, and goals.

Online retailer of secondhand clothing thredUP provides a [Fashion Footprint Calculator](#) for customers to learn how their shopping habits contribute to climate change (**figure 4**).

Figure 4: thredUP's Fashion Footprint Calculator

thredUP hooks customers with the question, "How dirty is your closet?" With every question, thredUP provides a fact about how the behavior affects the environment.

User-generated content

User-generated content is created by customers without compensation for their contributions. Users typically provide photos, videos, and testimonials. This technique is another great way to increase your reach and engage customers by inviting them to participate with your brand. You can encourage customers to create content by hosting challenges or contests involving customer submissions. Or encourage customers to tag you in their posts.

User-generated content can save you time and money because you aren't creating the content yourself. But you should monitor posts to make sure they represent your brand well. Some customers might create negative or inappropriate content or steal materials from another source, which can cause legal issues.

PECO asks customers to submit photos on Instagram and tag @pecoconnect and #poweredbyPECO (**figure 5**).

Figure 5: PECO's user-generated content

Especially on social media, user-generated content brings attention to the utility and the contributor.
